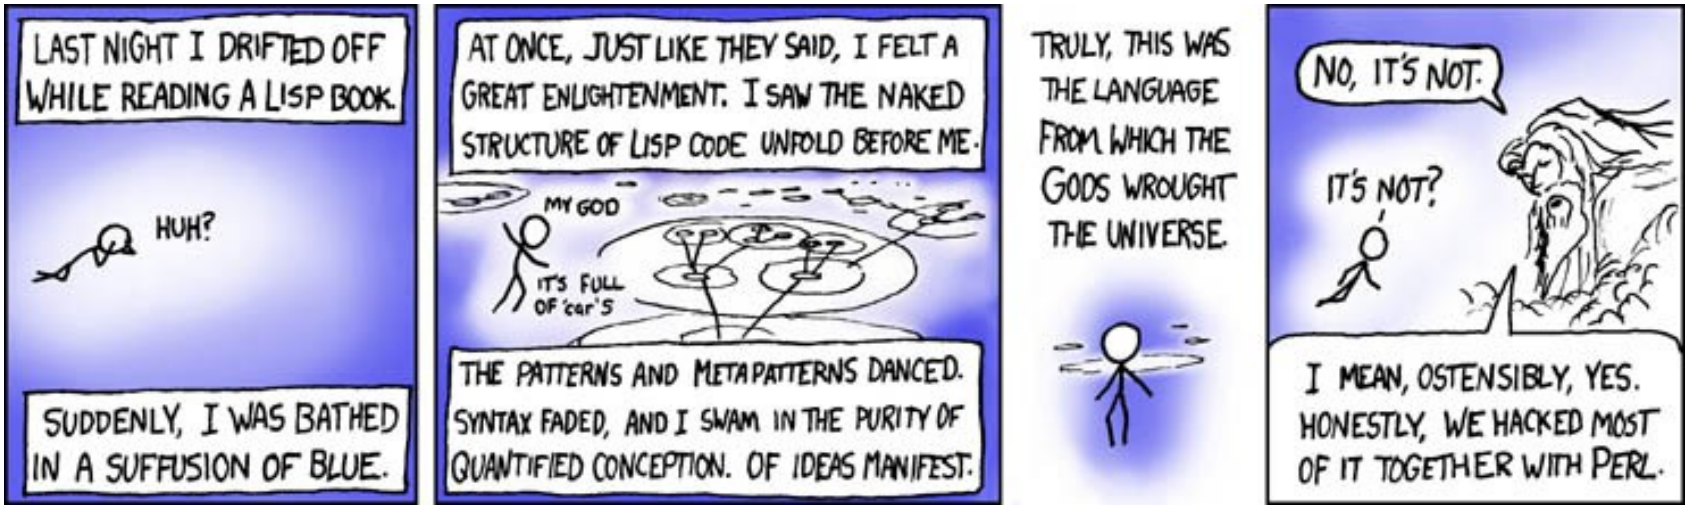
CS 430 Spring 2020

Mike Lam, Professor

Programming Languages



Opening challenge: how many programming languages can you name?

Overview

- *Programming language (PL)*
  - Tool for **formal** expression of problems and solutions
  - Audience: humans and machines
- General topics
  - **Syntax** (what a program looks like)
  - **Semantics** (what a program means)
  - **Implementation** (how a program executes)

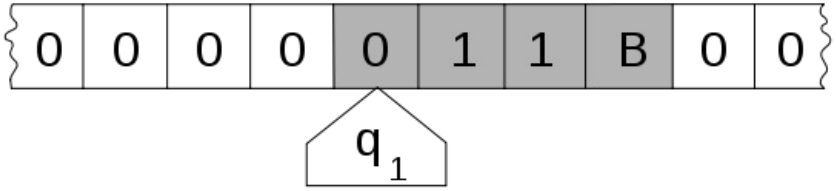
Why are PLs needed?

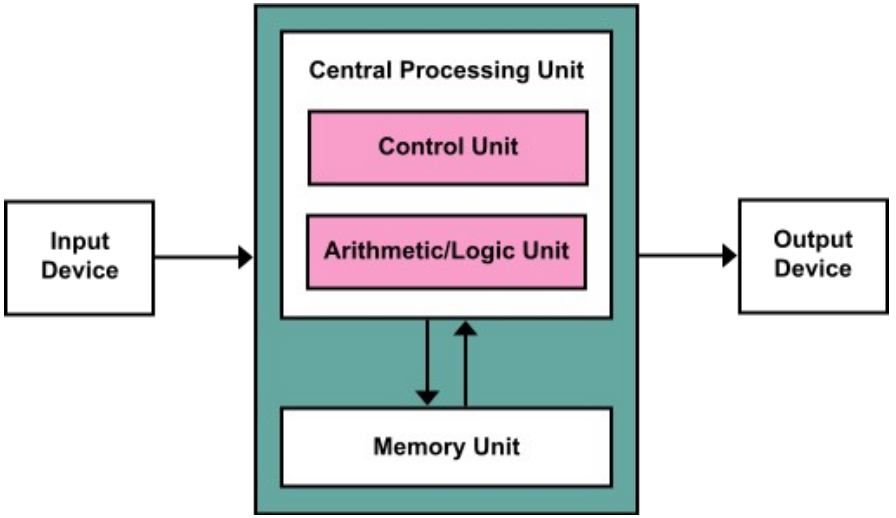
- Humans excel at approximate and contextual understanding
  - Imprecise language is often easier and quicker
  - Ex: "Meet you at Sabor at 6?"
  - vs. "I request your presence at 95 S. Main St., Harrisonburg, VA, at 18:00 GMT-5 on 2020-01-15"

- Machines are not humans (and thus less forgiving)
  - They are (currently) slower and less accurate at language recognition and interpretation
  - Thus, programming in a natural language is a Bad Idea™

Why so many PLs?

- Surprising result: all languages are (theoretically) equivalent
  - A language is "Turing-complete" if it can compute anything computable by a Turing machine
  - Most modern languages are Turing-complete
- Also, most are designed for a von Neumann architecture
  - Data and program in the same memory
  - Fetch-decode-execute cycle





Why are there so many?

- Evolution over time
  - Just like human languages
- Deliberate design efforts
  - To address shortcomings of existing languages

Which language is best?

- It depends!

Our Goals

- Compare programming languages with regard to syntax and semantics
- Discuss language implementation issues and the tradeoffs involved
- Gain experience in learning new languages
- Gain experience using different language paradigms
  - E.g., scripting, functional, and logic-based

Course Design

- Mastery model
  - Course content divided into ~20 modules
  - Ungraded activities to **achieve** mastery
  - Graded assessments to **prove** mastery

- Schedule
  - 1-2 modules per week
  - Lectures and labs Monday and Wednesday (and sometimes Friday)
  - Assessment(s) due on Friday
  - Final grade is mean of all individual module grades

Tentative Schedule

Week	Date	Module(s)	CPL
1	Jan 13	01: Intro and Ruby 1 (R/P)	1
2	Jan 20	02: Syntax (B)	3
		03: Parsing (R)	4
3	Jan 27	04: Ruby 2 (P)	
4	Feb 3	05: Scope and Lifetime (B)	5
		06: Names and Bindings (R)	
5	Feb 10	07: Type Checking (B)	6
		08: Data Types (R)	
6	Feb 17	09: Haskell 1 (P)	15
7	Feb 24	10: Expressions (B)	7
		11: Control Structures (R)	8
8	Mar 2	12: Haskell 2 (P)	
	Mar 9	Spring Break	
9	Mar 16	13: Parameters (B)	9
		14: Subprogram Invocation (R)	
10	Mar 23	15: Prolog 1 (P)	16
11	Mar 30	16: Activations and Environments (B)	10
12	Apr 6	17: Prolog 2 (P)	
13	Apr 13	18: Abstraction and OOP (B)	11, 12
14	Apr 20	19: Concurrency and Error Handling (B)	13, 14
15	Apr 27	20: History (R)	2
		Review	

Module Types

- **Basic**
  - Learn via readings, lectures, and labs
  - Assessed via closed-book quiz in class on Friday
    - Option for second try the following Friday
- **Reading**
  - Learn via reading
  - Assessed via open-book Canvas quiz due Friday
    - Option for second try due the following Friday
- **Programming**
  - Learn a language by working on short projects
  - Assessed via automated testing (submit on Canvas)
  - No retakes!

Learning Activities

- Module guides: lists of objectives
- Readings: Sebesta's "Concepts of Programming Languages" (CPL)
  - Reading is important
  - Some material will not be covered during class
- In-class lectures: focused on harder material
- Labs: in class, not graded
  - **Attempt labs before coming to class**
- Web/Canvas resources

Questions?

Let's talk about PL

- Why should we want to study languages?

This material is also covered in Chapter 1 of your textbook.

Why PL?

- Increased capacity to express ideas
  - E.g., objects or associative maps in languages that don't explicitly provide them
- Improved background for choosing appropriate languages
  - We tend to choose things that are familiar, so it is advantageous to be familiar with many languages
- Increased ability to learn new languages
  - Practice helps, as does learning PL fundamentals
  - Also improves mastery of already-known languages

Why PL?

- Better understanding of implementation
  - Move beyond superficial differences between language syntax (whitespace, brackets, etc.)
  - Helps with program debugging
- Overall advancement of computing
  - Broader knowledge enables informed trends
  - Hindsight: what if ALGOL 60 had become more popular than Fortran in the 1960s?

Why PL? (the real reasons)

- Knowing more languages looks good on your resume
- Knowing PL theory makes you a more valuable employee
- You get to brag about all the stuff you know
- It's fun!
  - (I think so, anyway...)

How do we evaluate languages?

- Readability
  - How easy is it to understand already-written code?
- Writability
  - How easy is it to write clear, efficient code?
- Reliability
  - How easy is it to write programs that adhere to specifications?

This is a Sudoku solver in Perl:

```
$_=$`.$_.$'.<>;split//;${/[@_[map{$i-($i="@-")%9+$_,9*$_+$i%
9,9*$_%26+$i-$i%27+$i%9-$i%3}0..8]]/o||do$0}for/0/||print..9
```

(or is it?)

Evaluating Languages

- Simplicity (few basic constructs, minimal overloading)
- Orthogonality (independence of features, feature symmetry)
- Data types (expressive without being redundant)
- Syntax design (consistency, sensible keywords)
- Support for abstraction (subprograms, data structures)
- Expressivity (convenience, "elegance")
- Type checking (strict is safer, but cost vs. benefit is debatable)
- Exception handling (early detection, clean handling)
- Restricted aliasing (make it apparent)
- Standardization (respected organization, appropriate time)

Evaluating Languages

- Various costs
  - Programmer training
  - Code writing and debugging
  - Compile time
  - Execution time
  - Runtime system
  - Maintenance
  - Porting
- Tradeoffs exist between these criteria and costs
  - Language designs represent points on these spectrums

Language Categories

- Traditional bins:
  - Procedural/imperative (assembly, Fortran, COBOL, ALGOL, C)
  - Functional (Lisp, Scheme, Haskell)
  - Logic- or rule-based (Prolog, Make)
  - Object-oriented (Smalltalk, C++, Java, Ruby)
- Other bins:
  - Visual (Visual Basic, Adobe Flash)
  - Scripting (Perl, Javascript, Python, Ruby)
  - Markup or metadata (HTML, LaTeX)
  - Educational (Scratch)
  - Special-purpose or domain-specific

Contexts

- Context matters!
  - Languages do not exist in a vacuum

Context: Programming Domains

- Scientific
  - Primary concern: efficiency (speed)
- Business
  - Primary concern: data processing and formatting
- Artificial intelligence
  - Primary concern: symbolic computation
- Systems
  - Primary concern: efficiency, low-level access, and portability
  - Safety and security are a rapidly-growing concerns
- Web
  - Primary concern: presentation and ease of development

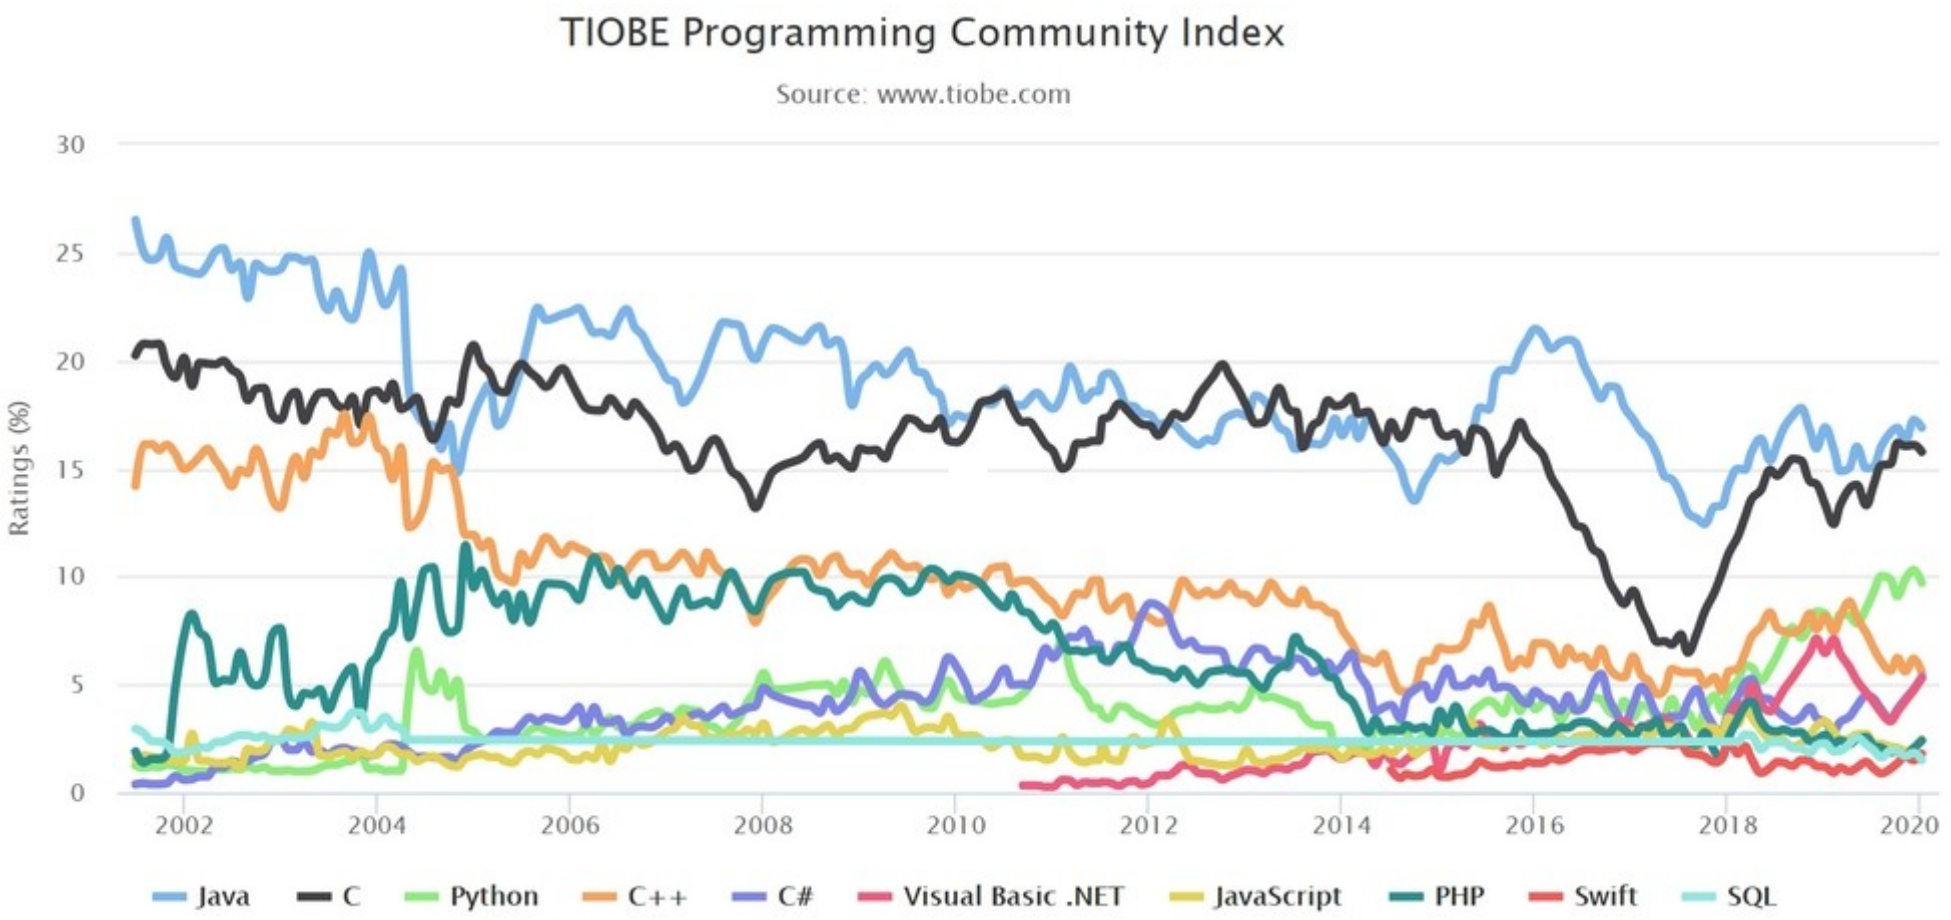
Context: PL Design Influences

- Hardware/architecture design shifts
  - Historic prevalence of imperative/procedural languages that closely match the hardware (von Neumann architecture)
  - Cheaper hardware → higher-level languages
- Software development methodology shifts
  - Shift from procedure-oriented to data-oriented
  - Better software engineering practices → desire for “safer” languages
  - Agile programming and rapid prototyping languages
- Social, cultural, and political shifts
  - Millennial and post-millennial generation cultures (web languages and frameworks)

Relative Popularity

- What do you suppose was the fastest-growing language in 2019?
  - (according to the TIOBE index, anyway...)

Relative Popularity



Fastest growing language of 2019? C!
(Python was a close second)

Historical Popularity

Programming Language	2020	2015	2010	2005	2000	1995	1990	1985
Java	1	2	1	2	3	-	-	-
C	2	1	2	1	1	2	1	1
Python	3	7	6	6	23	21	-	-
C++	4	4	3	3	2	1	2	12
C#	5	5	5	8	8	-	-	-
Visual Basic .NET	6	10	-	-	-	-	-	-
JavaScript	7	8	8	9	6	-	-	-
PHP	8	6	4	5	29	-	-	-
SQL	9	-	-	97	-	-	-	-
Objective-C	10	3	22	37	-	-	-	-
Lisp	31	18	16	12	14	5	3	2
Ada	35	29	25	15	15	6	4	3
Pascal	219	16	13	75	12	3	20	5

First New Language: Ruby

- Ruby is a **dynamically-typed**, **pure object-oriented**, **interpreted** scripting language

```
puts “Hello world!”    # this is a complete program!
```

There is a lab posted on the website to help you learn Ruby.

The first PA is also posted.

On Wednesday and Friday we will have open lab time to work on learning Ruby, beginning with a guided tour on Wednesday.
On Friday, we will also begin Module 2 because of MLK Jr. Day.

Learning New Languages

- Write code!
  - Learning *about* a language ≠ learning the language
- Ideas:
  - Do the provided labs!
  - Do the programming assignments
  - Re-write your CS 149 projects in the new language
  - Re-write a hobby project in the new language
  - Solve problems on a site like Kattis, HackerRank, etc.

Good luck!

- For Wednesday:
  - Take the intro survey (if you haven’t already)
  - Start learning Ruby by starting the lab
  - Take the M1 reading quiz if you wish
- Have a great semester!
